

# WE ARE BONSAI

Bonsai is a professional services company focused on supporting schools, districts, and educational institutions with technology planning, campus infrastructure, classroom technology, edtech training and assistance implementing student device programs.

## YOUR SCHOOL'S TECHNOLOGY, REIMAGINED

**BONSAI IS ALWAYS  
LOOKING FORWARD.**

“We are driven to provide helpful solutions for schools so they can better prepare students for the ever-changing world ahead.

“Technology can be complicated, but our mission is simple: To impart innovation into education.

# BONSAI SUPPORTS SCHOOLS ON ALL FRONTS.

Our goal is to provide a cohesive learning environment that utilizes technology in a way that enhances the experience for both staff and students. This means starting at your tech foundation and working up.

# Bonsai Content Filtering Package

Here at Bonsai, we work with your school to help ensure your students are safe online. With the online world today's students live in, it is essential to filter their access to the web during school hours. Our comprehensive package is structured to fit your school's unique needs. Our multi-faceted approach to content filtering provides multiple layers of protection for your students.

Bonsai Content Filtering includes network-level filtering and management of all device-level filtering the school wishes to acquire. Some options do have system requirements to work as expected.

## All Devices

Our content filtering package includes network-level filtering of websites on a student network. This filtering blocks access to inappropriate categories and specific sites (on request).

## Unmanaged iPads (unpaid MDM)

Each type of device and management system has its own filtering suggestion. Unmanaged iPads are difficult if not impossible to filter on a device basis. Free management systems help by providing limited content filtering capabilities.

## Managed iPads (Paid MDM)

Our content filtering package includes network-level filtering of websites on a student network. This filtering blocks access to inappropriate categories and specific sites (on request).

## Chromebooks/ Chromeboxes

Google's Chrome operating system lends itself to security. Google lets schools manage how students access the internet and what they can see. This includes blocking extensions/apps and specific websites.

For additional options and features, you can expand filtering with other paid services.

- At Bonsai, we are continually researching and adjusting our recommendations for content filtering to take advantage of the most complete and "safe" system. We are always happy to work with schools on their individual needs. If you are interested in information regarding additional paid filtering services, please let us know.
- Like all solutions, content filtering is not a 100% fail-safe and cannot replace the diligence and support of teachers in the classroom. Some options may restrict content that your teachers may want to access during lessons.
